

A Brand New Oyster Mushroom Strain

(Pleurotus ostreatus)

SylvanG8™

Protected by CPV rights #20173220
A uniform plant variety right, which is
an intellectual property right, like a patent,
but designed for plant varieties of which
material is produced and commercialised.

SYLVAN G8™

*Sylvan G8 is the latest innovation from Sylvan in collaboration with the Agricultural University of Athens, Laboratory of General and Agricultural Microbiology. G8 is a brand new Oyster mushroom strain (Sporulating *Pleurotus ostreatus*) which offers High Productivity, being the perfect alternative.*

VARIETY CHARACTERISTICS

- ✓ Sylvan G8 (Sporulating *Pleurotus ostreatus*) is a protected strain especially suitable for Autumn, Winter and early Springtime
- ✓ High productivity
- ✓ In bunches, caps are separated and easily cut
- ✓ The cap is of average size, round, fleshy and grey in colour
- ✓ Good shelf life after harvesting

GROWING CHARACTERISTICS

- ✓ Spawnrun will take 15-20 days and primordia will appear 25-30 days after spawning. This could vary depending on growing conditions
- ✓ It provides homogeneous pinning
- ✓ During the fruiting stage, Sylvan G8 may be grown in a temperature range of 15-18° C
- ✓ Manage the correct balance between ventilation, fresh air, humidity and amount of compost per square metre
